

MICROBLADING

Dream Spa Medical is proud to present the latest technique in semi-permanent makeup applications. Microblading is an eyebrow enhancement treatment that inserts pigment into the outer layers of the skin. Unlike traditional brow tattoos, microblading allows us to deposit the pigment in precise, hair-like strokes, creating a very natural finish. Whether you're reconstructing, reshaping, or simply filling in gaps, the finished product will look just like your actual brows. Only better!

Microblading is a two-part treatment. The first session, also known as the "fill", involves shaping the brows, mapping out symmetry, color selection and treatment. The "finish" appointment should be scheduled 6 weeks later. This session involves color correction and additional strokes to complete the look. Both appointments are covered in the initial cost. The results can last up to 18 months depending on skin type and home care, after which time the pigment fades.

Touch-ups may be required to maintain results. Discounted rates are applied to touch-up appointments booked within 10 months of the finished treatment.

PRE-TREATMENT

- Avoid alcohol for 24 hours prior to your appointment.
- Avoid caffeine the day of your appointment.
- Avoid active ingredients such as acids, astringents, retinoids or topical medications for 5-7 days prior to treatment.
- No electrolysis for in treatment area for 5-7 days prior.
- No waxing, bleaching or depilatories in the treatment area 2 days prior.
- No chemical peels or laser treatments for 2 weeks prior to your appointment.
- Please inform your artist of any hormone therapies, antibiotics, or anticoagulants, including daily doses of aspirin.

POST-TREATMENT

**Please follow these instructions for 14 days post Microblading.*

- No makeup directly on the brows
- Avoid wetting the eyebrows. If your eyebrows get wet, gently pat them dry. Your artist will provide tips.
- Avoid sauna, steam rooms and heavy perspiration.
- Avoid direct sun exposure and tanning beds.
- Do not touch, rub, pick or scratch your brows.
- Apply healing balm according to your skin type. Your artist will make recommendations.
- Cleanse brows at night. Use a damp q-tip to remove excess healing balm, pat dry and allow the skin to breath. Apply final layer of balm before bed.
- Avoid active ingredients such as acids, astringents, retinoids or topicals on or above treatment area.
- Mild redness and/or swelling can be expected.
- Post treatment bleeding is possible.

PLEASE NOTE

Recovery is a fluid process. The pigment will become significantly darker after your session, and then fade away. During this time the skin may begin to flake or scab. it is very important that you allow the skin to heal without picking or scratching. Entering into the second week, the pigment will re-aggregate and your brows will begin to return.

If you are due to have an MRI or give blood, please inform your provider that you have had a semi-permanent makeup application.
