

VELASHAPE

Dream Spa Medical is pleased to offer VelaShape, a non-invasive body contouring treatment for circumferential and cellulite reduction, the treatment enables us to safely create a toned and tightened body, making you look and feel healthier and more youthful.

VelaShape combines infra-red light, bipolar radio frequency energy, massage manipulations, and vacuum pressure to create a deep heating of the fat cells. This process also stimulates the growth of collagen and elastin, which results in a localized reduction of laxity and body volume, while improving the overall structure and texture of the skin.

Best results are achieved with a series of 3-6 weekly treatments. Coupled with UltraShape, we can effectively eliminate unwanted fat cells in a short period of time.
